

We give people drive through education

Drive is a prerequisite for innovation. People with drive and skills are needed if theories, ideas and innovative thinking are to move from desk to real life and businesses' bottom lines.

Erhvervsuddannelsescenter Syd

South Jutland's global school for people and businesses

ErhvervsUddannelsesCenter Syd (EUC Syd - Vocational Educational Centre South) is South Jutland's largest educational institution. Every year, we provide education and supplementary training for more than 25,000 people, giving them drive. We make sure that both staff and businesses can keep their finger on the labour market's fast pulse and act with ease on the international market.

At EUC Syd, we offer 75 long- and short-term vocational programmes, and more than a thousand different AMU (adult vocational training) and supplementary training courses. We form the framework for the focused Teknisk Gymnasium Sønderjylland (HTX) (technical upper secondary school), the internationally recognised International Baccalaureate Diploma Programme, which is taught in English, and the unique new EUX, which combines vocational training with upper secondary school subjects. Furthermore, EUC Syd serves as VEU centre (adult and supplementary education centre) in the Region of Southern Denmark.

All our educational programmes and courses equip students, course participants and businesses for real life. This means that we take our starting point partly in the individual student's needs and competences, and partly in the world and the businesses where the competences are in demand.

Drive is one half of all innovation

At EUC Syd, we provide people with drive through education. This is why our students can convert knowledge into action with a focus on how to succeed.

International outlook

At EUC Syd, we train people to act in a global world, and the school is characterised by an international learning environment. Naturally, communication between students across national borders is a part of our programmes, just as fellowship, visits, internships and educational stays outside the school form part of everyday life.

For instance, we offer the international IB Diploma, and we participate in a whole string of collaboration projects with schools abroad. Many of the students who follow our vocational training programmes gain part of their scheduled work experience abroad, and students in some of the upper secondary school programmes have the opportunity to spend time in e.g. the USA and Germany.

Focus on the surrounding world, the present and future markets

INTERACTION WITH BUSINESSES

As South Jutland's largest educational institution, EUC Syd is a natural, integrated part of a dynamic business community. EUC Syd is located in a part of Denmark that is known for its innovative and market-leading industrial businesses. This affects us, just as we have an effect on them.

In close collaboration and dialogue with local businesses, we train people to meet the demand of tomorrow's labour market, ensuring that employees can keep their finger on the pulse and keep up with development.

This makes us an important key to success in the increasing globalisation. This is a task that we do not treat lightly. It is our most noble task to provide the labour market with a continual flow of highly qualified labour. We therefore develop in step with the needs of the business community, keeping abreast with development.

EUC Syd is the business community's professional partner. This means that we pay close attention to the businesses' challenges, so that together we can customise the right solutions that match both the businesses' special and individual needs and the general demand in society.

Always on the move

At EUC Syd, we constantly develop and expand our own competences and facilities. This means that we are one step ahead, and that we are able to teach about the latest technologies and tools. This enables us to turn out well-educated people who are equipped to be at the forefront of their professions.

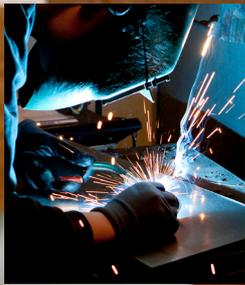

Global reality

A rapidly developing labour market, increasing globalisation and international distribution of labour all pose new demands on both the business community and the labour force's qualifications and competences. The fact is, that it is becoming increasingly common that products are developed entirely or partially in one country, then produced in another, and finally sold in a third country. This is the reality that the South Jutland

business community acts within – and this is the reality that EUC Syd trains people for.

This is achieved partly via a series of international educational offers, and partly by weighting cultural understanding, values in international businesses, language competences, adaptability and the ability to participate in dialogues via technological tools in EUC Syd's open learning environments. EUC Syd thus educates people to be familiar with the globalised labour market.

We build career foundations and provide qualifications to help people move on – all the way

Reality-orientated education for a great variety of industries – under one roof

As one of Denmark's largest educational institutions, EUC Syd offers a very broad palette of educational options. In practice, this means that at any given time, we are able to accommodate the business community's and society's changing needs for education and qualified employees.

With hundreds of different educational programmes, courses and supplementary training options gathered under EUC Syd's roof, synergy is created, both among the different subjects and between theory and practice. When combined with the international learning environment, this makes a unique whole, creating a very special educational institution where tomorrow's key workers can both be educated and follow supplementary training.

EUC Syd trains people within e.g.:

Educational offers at EUC Syd

VOCATIONAL PROGRAMMES

EUC Syd offers 75 different vocational programmes

- From hairdresser to tile layer
- From nutritional assistant to electrician
- From technical designer to carpenter
- From joiner to chimney sweeper

On completing their training, students are awarded a skilled worker's certificate, and they are ready to join the labour market immediately.

EUX is a combination of a vocational programme and a technical upper secondary school programme, at the end of which students are awarded both a skilled worker's certificate and a student's cap. This means that the qualification can be used either to enter the labour market directly or to apply for enrolment in a higher education programme.

TECHNICAL UPPER SECONDARY SCHOOL PROGRAMMES:

The upper secondary school programmes offered at EUC Syd provide students with qualifications that entitle them to apply for enrolment in higher educational programmes, e.g. at universities and engineering colleges.

- HTX Technical Upper Secondary School South
- International Baccalaureate - IB diploma

SUPPLEMENTARY TRAINING AND AMU

At EUC Syd, we offer more than a thousand different AMU (adult vocational training) and supplementary training courses, i.e. within practically all fields, industries and services, e.g. data, transport, employee development, energy technology, robot technology, electronics, the food industry and much more.

The supplementary training courses are customised to meet the individual course participant's or company's needs.

- Automatics and processes
- Construction and building
- Design and fashion
- Electronics
- Energy optimisation
- Nutrition and gastronomy
- Innovation
- IT/data
- Communication
- Mechanical engineering
- Employee development
- Measuring technology
- Motors
- Health
- Technology and CNC
- Transport and logistics

The AMU includes the VEUD programme (adult vocational training) and GVU (basic adult education).

An inspiring environment that creates commitment

At EUC Syd, the crossfield between learning, facilities and physical settings creates a unique educational and school environment that supports the individual student's well-being, learning and development.

An attractive workplace

EUC Syd is the workplace of 410 competent employees. 300 of these are teachers. In addition, people are employed in the many staff functions and specialist centres, such as EUC Syd's Customer Centre, IT Centre, Resource Centre and Development Centre.

EUC Syd's employees are one of the primary reasons why EUC Syd is now one of Denmark's most successful educational insti-

tutions. To the employees, development and change are natural parts of the day-to-day work. This is an essential prerequisite for EUC Syd to be able to offer contemporary education and stay abreast with development on a continual basis. EUC Syd's employees are characterised by dedication and professionalism. The working environment is informal and inspiring and marked by great independence, responsibility and close collaboration.

When learning and physical settings go hand in hand

At EUC Syd, we have deliberately chosen to move further and further away from the traditional educational environment, i.e. one teacher, one class. Instead, we focus on learning rather than on teaching. Thus, we support the students' individual learning at the speed and pace that suits the individual. This is evident not only in our pedagogy, but also in our physical settings and facilities.

Today, EUC Syd is distributed across addresses in Aabenraa, Tønder, Haderslev and Sønderborg – and across more than 100,000 m² under cover. At all of the sites, the school is characterised by open learning environments that include e.g. sofa groups, wireless networks and ample space for portable PCs. The large, bright and modern classrooms are designed and laid out flexibly, so that they can be adapted to different learning situations. The school's professional workshops are equipped with state-of-the-art robot technology, work tools and other equipment. Inviting canteens, Internet cafes and boarding schools are also a natural part of the international learning environment at EUC Syd.

A widely representative Board

At EUC Syd, we educate the labour force that is the prerequisite for our labour market to work and continue to develop in step with time. Therefore, both employers and employees are represented on EUC Syd's Board.

EUC Syd's Board consists of 13 members:

- Eight members represent employers and employees, largely covering the school's current field of activity
- One member is appointed by Haderslev, Tønder, Aabenraa and Sønderborg Municipalities
- Two members are employee representatives
- Two members are student representatives

Constantly in contact with reality

EUC Syd is a vibrant school that is constantly undergoing development. Developing in step with the globalised labour market locally, nationally and internationally requires the exploration of new trends and constant attention to business and market signals. Dialogue with the business community and international collaboration with other educational institutions across

the world are therefore very high up on EUC Syd's agenda. The dialogue and collaboration inspire new innovative solutions and concrete educational offers. In turn, this creates synergy and exciting opportunities that set a precedent for how we as an educational institution in close partnership with the business community can give people drive through education.

Overview in safe hands

THE ORGANISATION

EUC Syd is a well-organised educational institution, which is run in accordance with modern management principles. The fact that EUC Syd gives people drive through education is reflected to a great extent in the school's internal life and organisation. The professional and dynamic three-person management team makes sure that the distance from idea to action is short, and that focus is continually directed at maintaining an inspiring and coaching working environment that supports the employees' professional and human development.

College strategy

EUC Syd has a sustainable perspective to

- Our cooperation with industry and business
- Our educational programmes
- The operation of the college buildings and daily routines
- Internal training of staff
- Our participation in new projects

Education is important to meet the demands of industry and EUC Syd is a major partner with local industry and business. The development of new educational programmes must correspond with the demands from industry and business.
